

Forage Oats

Oat Production Trial

Sowing to first grazing

NB: Time of sowing for all oat varieties dramatically affects rate of growth to first grazing and overall maturity time. As a general rule all varieties sown early, whether they be quick or slow varieties will be quicker to first grazing stage and take longer to mature (having the advantage of the full growing season) than will the later sown.

The "unreal" forage oat - Riel produces quick early growth and recovers well from cutting or grazing.

- Can be grazed in as little as 45 days
- Suited to March-June sowings
- Semi-erect growth habit
- Good quality forage with high proportion of leaf to stem
- Suited to both dryland and irrigation
- Replacement for Minhafer oats
- PBR Protected No 210 Australia.

Cultivar Marketing inspect and rogue all their oat seed production crops to ensure the highest varietal purity.

Riel oat with its uniform broad leaf produces good quality forage with a high proportion of leaf to stem.

Agronomic Features

Variety	Early growth habit	Speed to initial grazing*	Quick feed	Silage
RIEL	Semi Erect	Quick	✓	✓

*Varies with planting date: Value here based on mid March-April sowing.

Riel forage oat variety was developed as part of the Department of Primary Industries Queensland, Oat Improvement Program. Riel is marketed throughout Australia by Cultivar Marketing Pty Ltd - a consortium of well respected independent seed companies. Cultivar Marketing Pty Ltd have combined their resources to offer rural industry superior agricultural plant varieties.

PROPRIETARY MATERIAL WARNING

Please note that the oat variety Riel is protected by the Australian Plant Breeders Act 1994. Under the act it is an offence to harvest and offer for resale the resultant seed crop for propagation purposes without the express consent of the owner. Please be advised that offenders will be prosecuted.
